

Therमारound is a highly efficient code compliant pre-insulated outdoor air distribution system designed to provide high R-values, increase air delivery, IAQ performance and exceptional water tight integrity that excels in providing high performance, healthy air delivery for your HVAC applications. Just like Therma duct, Therमारound is closed cell foam insulation, factory bonded to a UV stable vinyl clad. The interior of the duct passes through a smooth aluminum or galvanized steel lining. Therमारound is highly resistant to punctures, rips, tears and has exceptional rigidity. Therमारound's exclusive assembly process (Patent Pending) can virtually eliminate air leakage entirely while at the same time provide uncompromising water integrity.

#### Features

- R-12 Minimum Design
- Naturally Sheds Water
- UV Stable Vinyl Clad
- High Static Pressure Design
- Welded Seam Construction
- Gored Elbows – No need for turning vanes
- Very Corrosion Resistant
- Fast Installation
