TEMPORARY APPLICATIONS

DuctSox supplies air dispersion solution for temporary medical structures

DuctSox was asked to quote a fabric duct system this week for a number of the triage tents/structures that are being raised to address the Corona-19 virus. The system was required quickly and they were able to produce and ship on time.

EAP, Inc. and DuctSox are pleased that they were able to help be a part of getting these facilities up and running, which will help medical personnel speed up testing and treatment of the virus.

They are equipped to produce the necessary products for these projects.

Please note:

- All expedite fees will be waived
- Projects will be given prioritization in manufacturing
- First come, first serve basis

If you receive similar inquiries, please contact your EAP, Inc. representative to discuss the details.
