

# Seresco

Advanced Dehumidifiers  
WebSentry® Technology

has signed on with

**Seresco has built a reputation for premium equipment performance and reliability, combined with the lowest operating, energy, and maintenance costs in the industry.**

### NP Series

Seresco's reputation for innovation continues with the NP Series, a solution for some of the biggest problems faced by the dehumidification industry.

By using an environmentally-friendly water/glycol mix as a secondary heat exchange fluid, the NP (Natatorium Protocol) cuts refrigerant use by up to 85% and has the lowest operating costs in the industry – all the while providing superior humidity control and exceptional reliability. Installation costs are low, with factory-sealed refrigeration even on split systems, and no limit on line length to remote cooler.

### NE Series

An ultra-compact dehumidifier that houses its entire system in one cabinet for simple installation, yet keeps all critical components isolated from the pool air stream in a separate vestibule. The New NE Series is Seresco's most compact unit, making it ideal for applications where space is at a premium. Models 2 through 7 even fit through a 32-inch door.

The NE Series can attach the optional R3 Module, which can offer:

- Full-flow, titanium pool water heater
- Exhaust fan
- Booster fan
- Built-in air conditioning, without remote outdoor air-cooled condenser

### NE 200 Series

Enjoy the peace of mind of a 2-compressor system with redundant, fully independent circuits controlled by a single, sophisticated brain. The NE 200 offers all this in a compact footprint ideal for retrofit/replacement applications, available in vertical or horizontal configuration.

The NE 200 Series boasts great features like:

- Simplified installation by splitting the unit in two.
- Factory-sealed refrigeration means no costly on-site refrigeration work.
- Can fit through a 32-inch doorway (units up to 80 lbs/hr of moisture removal and 6,800 CFM).
- Two-compressor system benefits facilities with built-in redundancy and doubles capacity in the same footprint.
- Best-in-class energy savings.

### NV Series

The industry's most efficient ventilation-only unit, hands-down. For pools in dry climates, choose the Seresco NV Series for superior natatorium ventilation that delivers the best possible conditions year-round.

The NV Series offers:

- Best heat recovery in the industry, with up to 70% effectiveness when outside temperatures are less than 30°F.
- Modulating control ensures best possible space conditions while using the least amount of energy.
- Capable of 4,000 to 70,000 CFM of air handling.
